

Network Automation Solution: NPM Actions

Automate actions and NPM alert remediation with API-driven low-code workflows that address today's rapidly modernizing networks.

Tech innovation and tech team expectations have continued to diverge, with responsibilities and complexities on the rise and the ability to address the toil on the decline. As a result, EMA Associates reported that network team performance rankings have dropped from 47% in 2018 to 27% in 2022.

Observability = Visibility + Intelligence + Action

Performance monitoring has graduated to observability, with the expectation that visibility and insights are coupled with automated action and root cause remediation.

Once upon a time it might have been considered acceptable to action network performance alerts manually, but those days are behind us. Complex infrastructure, increasing volume, greater responsibilities, and the need to do more with less means automation is a must. But how do you remediate alerts automatically at scale to address this new reality?

The Solution

Pliant gives operations and engineering teams simplified and streamlined ways to automate, integrate, and connect their environments. Rather than dedicate talented and costly developers to act upon NPM alerts manually, Pliant customers can build automated workflows to complete these tasks quickly, efficiently, and repeatably.

Pliant has abstracted thousands of APIs from popular vendor products. The resulting low-code 'action blocks' make it easy, fast and flexible for users create common workflows for modern monitoring platforms like IBM SevOne NPM.

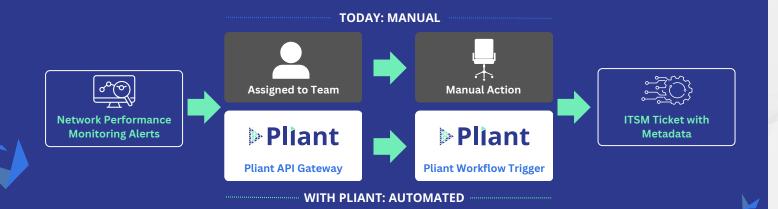

Presto! Faster time to value, increased productivity, and lower total cost of ownership. Teams also benefit from lower administrative overhead through centralized management, and seamless integration with leading NPM platforms and technologies up and down the stack.

Automate repeatable tasks to deliver on the promise of modern monitoring today.

Automated NPM Alert Resolution

How do you remediate alerts automatically at scale to address the demands of ever-increasing complexities and team responsibilities?

Pliant's low-code workflow engine helps deliver on the promise of observability. API-driven and highly flexible drag-and-drop "action blocks" transform manual effort into automated workflows, taking the time and toil out of NPM alert resolution. By enabling your team to automate network performance tasks, Pliant helps reduce human toil, accelerates network performance resolution, and drives costs downward.

Benefits

Accelerate NPM time to value by automating alert actions

Increase team productivity by reducing manual toil

Faster resolution of root cause performance issues

Modernize your IT environment quickly, easily and with maximum flexibility. **Simplify and streamline** the automation of any task across technology and organizational boundaries. **Build and deploy** custom, automated workflows and processes faster, easier, and with more flexibility than you ever imagined.
