

Pliant Orchestration Platform Overview for Financial Services

API-driven, low-code platform for automating, integrating, and connecting your technology stack

Financial services organizations have needed to be resilient through recent challenging times. Macroeconomic threats like rising inflation and ever-increasing cybersecurity challenges pose difficulty in achieving scalable digital transformation. [81%](#) of banking CEOs are worried about the speed of technological change, especially since the majority of financial institutions still leverage monolithic legacy systems.

Most have turned to traditional automation platforms, vendor-specific bundles, point solutions, and manual approaches to building their IT infrastructure. However, for those looking to take automation to the next level to continue to stay competitive, siloed tactics aren't enough.

What's needed is a fundamental shift to **cross-vendor, cross-domain orchestration and automation**. This requires fast, easy, and flexible ways to generate new workflows and processes that also work with existing automation investments. It's how a financial services organization can connect and integrate not just its tech stacks, but its entire business. And it's precisely what The Pliant Orchestration Platform delivers.

The Solution

The Pliant Orchestration Platform gives operations and engineering teams simplified and streamlined ways to use automation and orchestration more intelligently and effectively throughout their environments. With its powerful yet intuitive capabilities, the Pliant Orchestration Platform unlocks new ways for teams to automate, integrate, and connect their online organizations.

Pliant has abstracted thousands of APIs from popular vendor products. The resulting low-code 'action blocks' make it easy, fast and flexible for users to produce whatever automated processes and workflows they need. Users of all skill levels can create and deploy automation across platforms, services, and applications in hours, not days or weeks.

Pliant customers typically experience streamlined integration of systems to enable modern customer experiences and accelerated time-to-market for new digital offerings. They also benefit from lower administrative overhead through centralized management.

Get a jumpstart on building efficiencies into your organization so you can focus on delivering a world-class user experience. Contact our team to discuss your needs and how we can help: pliant.io | hello@pliant.io

Automate

Tasks and workflows to enable true digital transformation

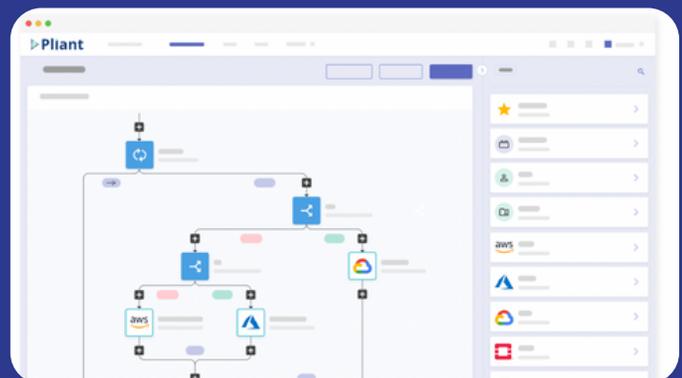

Integrate

Infrastructure and applications to deliver a seamless experience

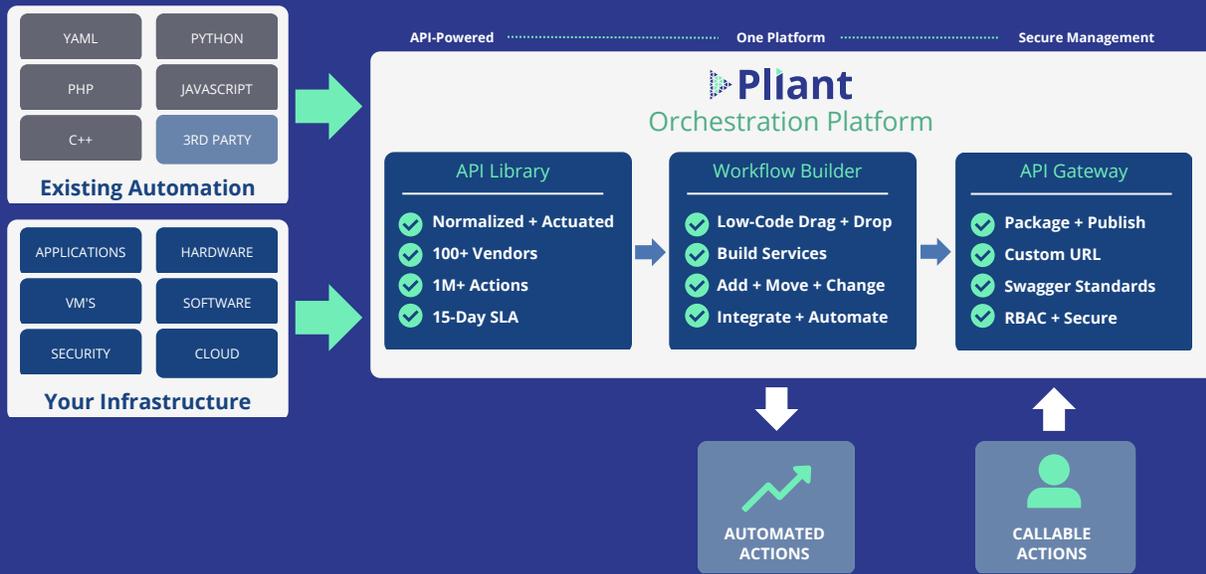

Connect

Data and processes to accelerate innovation and drive value

Pliant for Financial Services – How it Works

Pliant Orchestration Platform – Benefits

-  **Lower Costs & Preserve Investments**
-  **Increase Operational Agility**
-  **Improve Experiences & Productivity**
-  **Accelerate Time-to-Value for Users**
-  **Reduce Tool Sprawl & Eliminate Silos**
-  **Standardize Operations & Reduce Errors**

Popular Use Cases

-  **User Onboarding**
-  **Compute Provisioning**
-  **VM Provisioning**
-  **Bare Metal Provisioning**
-  **ITSM Orchestration**
-  **Embedded iPaaS**
-  **Container Provisioning**
-  **Audit & Remediation**
-  **Hybrid Network Configuration**

Learn More about automating, integrating, and connecting your organization to continue to delight guests at the highest level with the Pliant Orchestration Platform. Our experts are ready to help.
