

Network Automation Solution: Branch Orchestration

Orchestrate multi-vendor, multi-domain processes to accelerate time to value, reduce complexity, and eliminate toil.

As businesses transform their networks and branch infrastructure to increase agility, they adopt powerful new technologies that create unique visibility, interoperability, and control challenges. TechTarget states, "for the market to truly benefit from AIOps and automation, all SD-WAN elements need to talk with each other via API integration." Bespoke controllers, custom coding, or one-off tools don't address these challenges holistically.

Orchestrating the Branch Symphony

Powering a modern branch begins at day zero. Ensuring repeatable, manageable processes are in place takes work, and doing things right at the start has benefits in the long term. Orchestrating multi-vendor, multi-domain provisioning, configuration, and management allows organizations to accelerate predictable operations with lower costs, fewer human errors, and better results overall.

The Solution

Pliant gives operations and engineering teams simplified and streamlined ways to automate, integrate, and connect their environments. Our flexible workflow engine offers multiple ways to build workflows to suit your needs and take advantage of your existing investments.

At core, our API-driven low-code "action blocks" enable teams to build automation through a modern, graphical interface without the need for multiple tools or custom code. Pre-built workflows automate, integrate and connect the infrastructure stack, empowering businesses to orchestrate branch office technologies and processes rapidly, and repeatably.

The result?

Faster time to value, increased team productivity, and lower total cost of ownership. Pliant's library of integrations and unmatched SLA for new API-driven "action blocks" translate to unlimited coverage in one, unified platform.

Banish silos and make the branch strategy work - today.

Contact the Pliant team to discuss your needs and how we can help: pliant.io | hello@pliant.io

Automate

Provisioning and configuration of multiple technologies with one universal platform

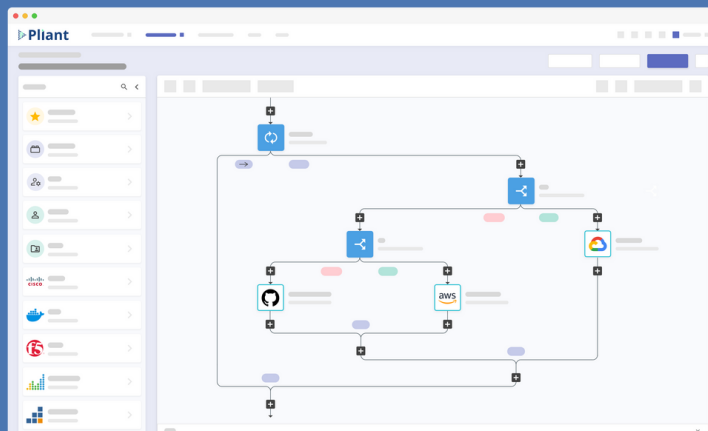

Integrate

Infrastructure elements to create a seamless, strategic branch experience

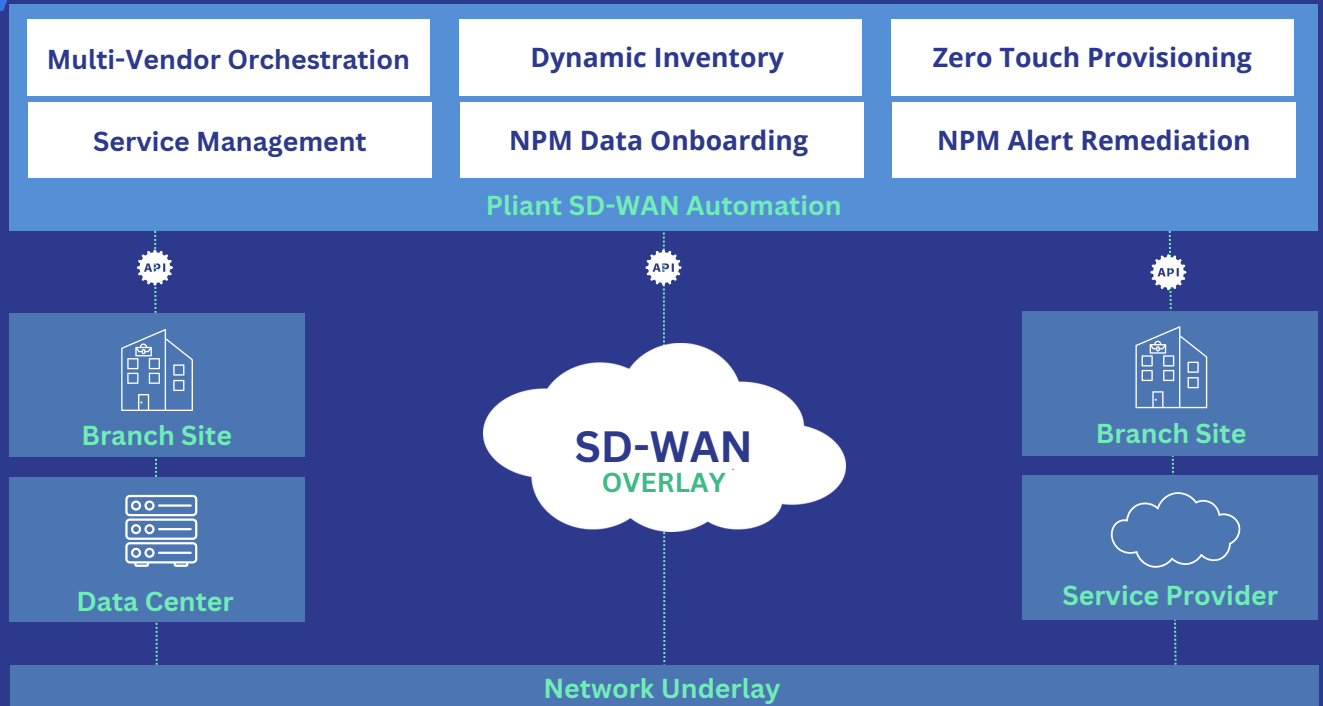

Connect

Devices and data to deliver automated observability, interoperability and control

Branch Office Orchestration – How it Works

Branch Orchestration

Pliant's low-code workflow engine enables accelerated and streamlined branch orchestration. API-driven and highly flexible drag-and-drop "action blocks" transform manual effort into automated workflows, taking time and effort out of provisioning and management - from day zero and beyond. By orchestrating multi-vendor, multi-domain branch processes automatically, Pliant allows teams to reduce manual toil, assure performance, lower costs, and increase productivity.

Benefits

Accelerate SD-WAN provisioning and configuration to reduce manual toil

Increase branch office performance and observability

Lower costs and increase team productivity

Modernize your IT environment quickly, easily and with maximum flexibility. **Simplify and streamline** the automation of any task across technology and organizational boundaries. **Build and deploy** custom, automated workflows and processes faster, easier, and with more flexibility than you ever imagined.
